

A Modified Bitumen (APP or SBS) roof is a high performance, multi-ply roof system consisting of composite sheets reinforced with various types of mats and surfaced with films, foils, or mineral granules.

Layers

Types of Modified Bitumen Roofing Systems:

- Atactic Polypropylene (APP), Installation is typically heat welded or with roofing adhesive.
- Styrene-Butadiene-Styrene (SBS) Rubber – Installation is heat welded, self-adhered, or with roof adhesive.
